

A

BERTopic topics

source not on disk — this row is reserved, not dropped

BERTopic assignments not found.

Copy one of these out of the Colab run's Drive output into data/analysis/content/ and re-run this notebook:

showcase_plus_id_topics.csv(id, topics)

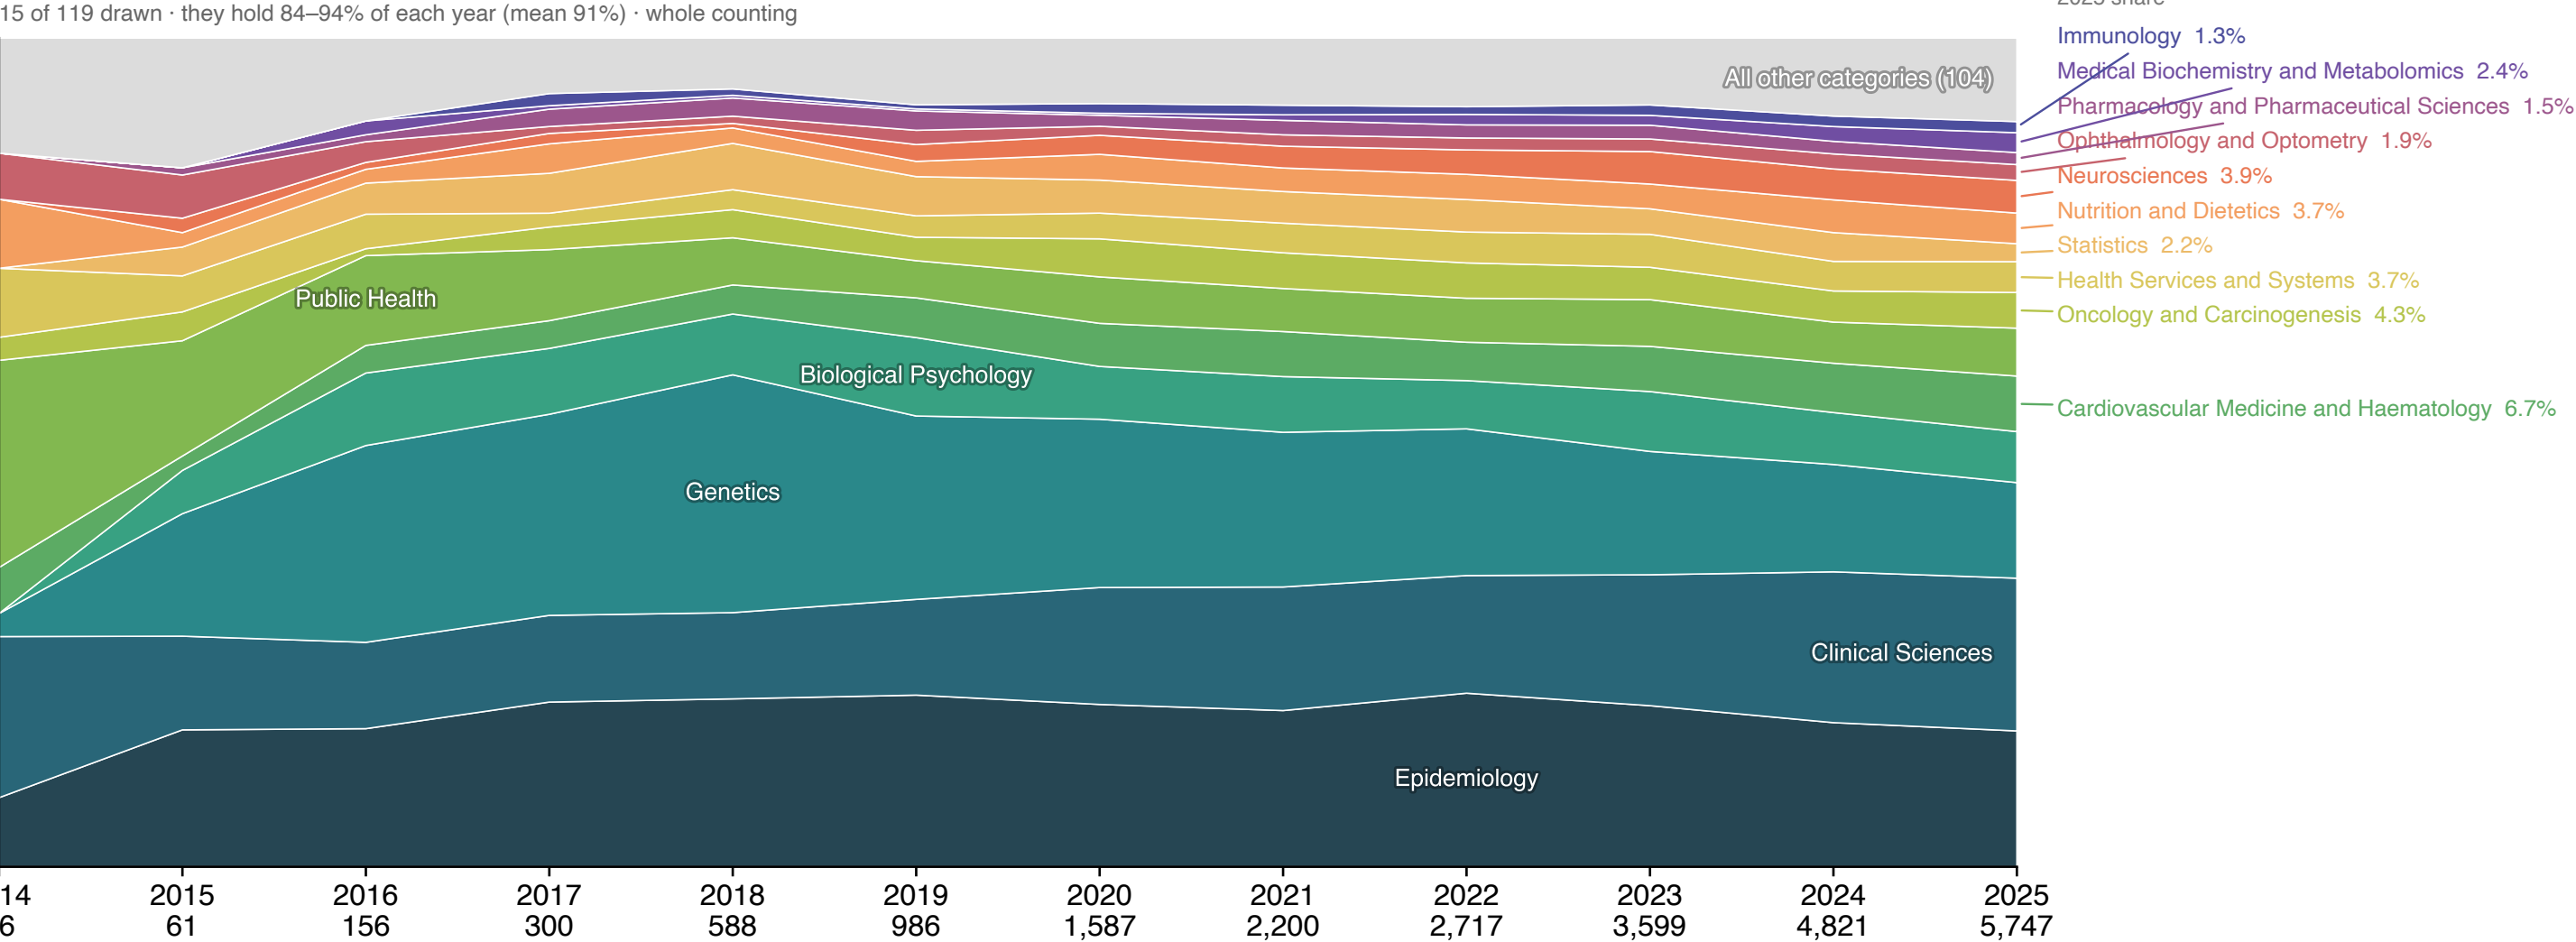

bertopic_document_topic_assignments.csv(id, year, topic, topics)

bertopic_topic_year_counts_selected.csv(year x topic)

The panel is not re-fitted locally on purpose: a fresh UMAP/HDBSCAN run would not reproduce the 76 topics the ledger records (D5, D6).

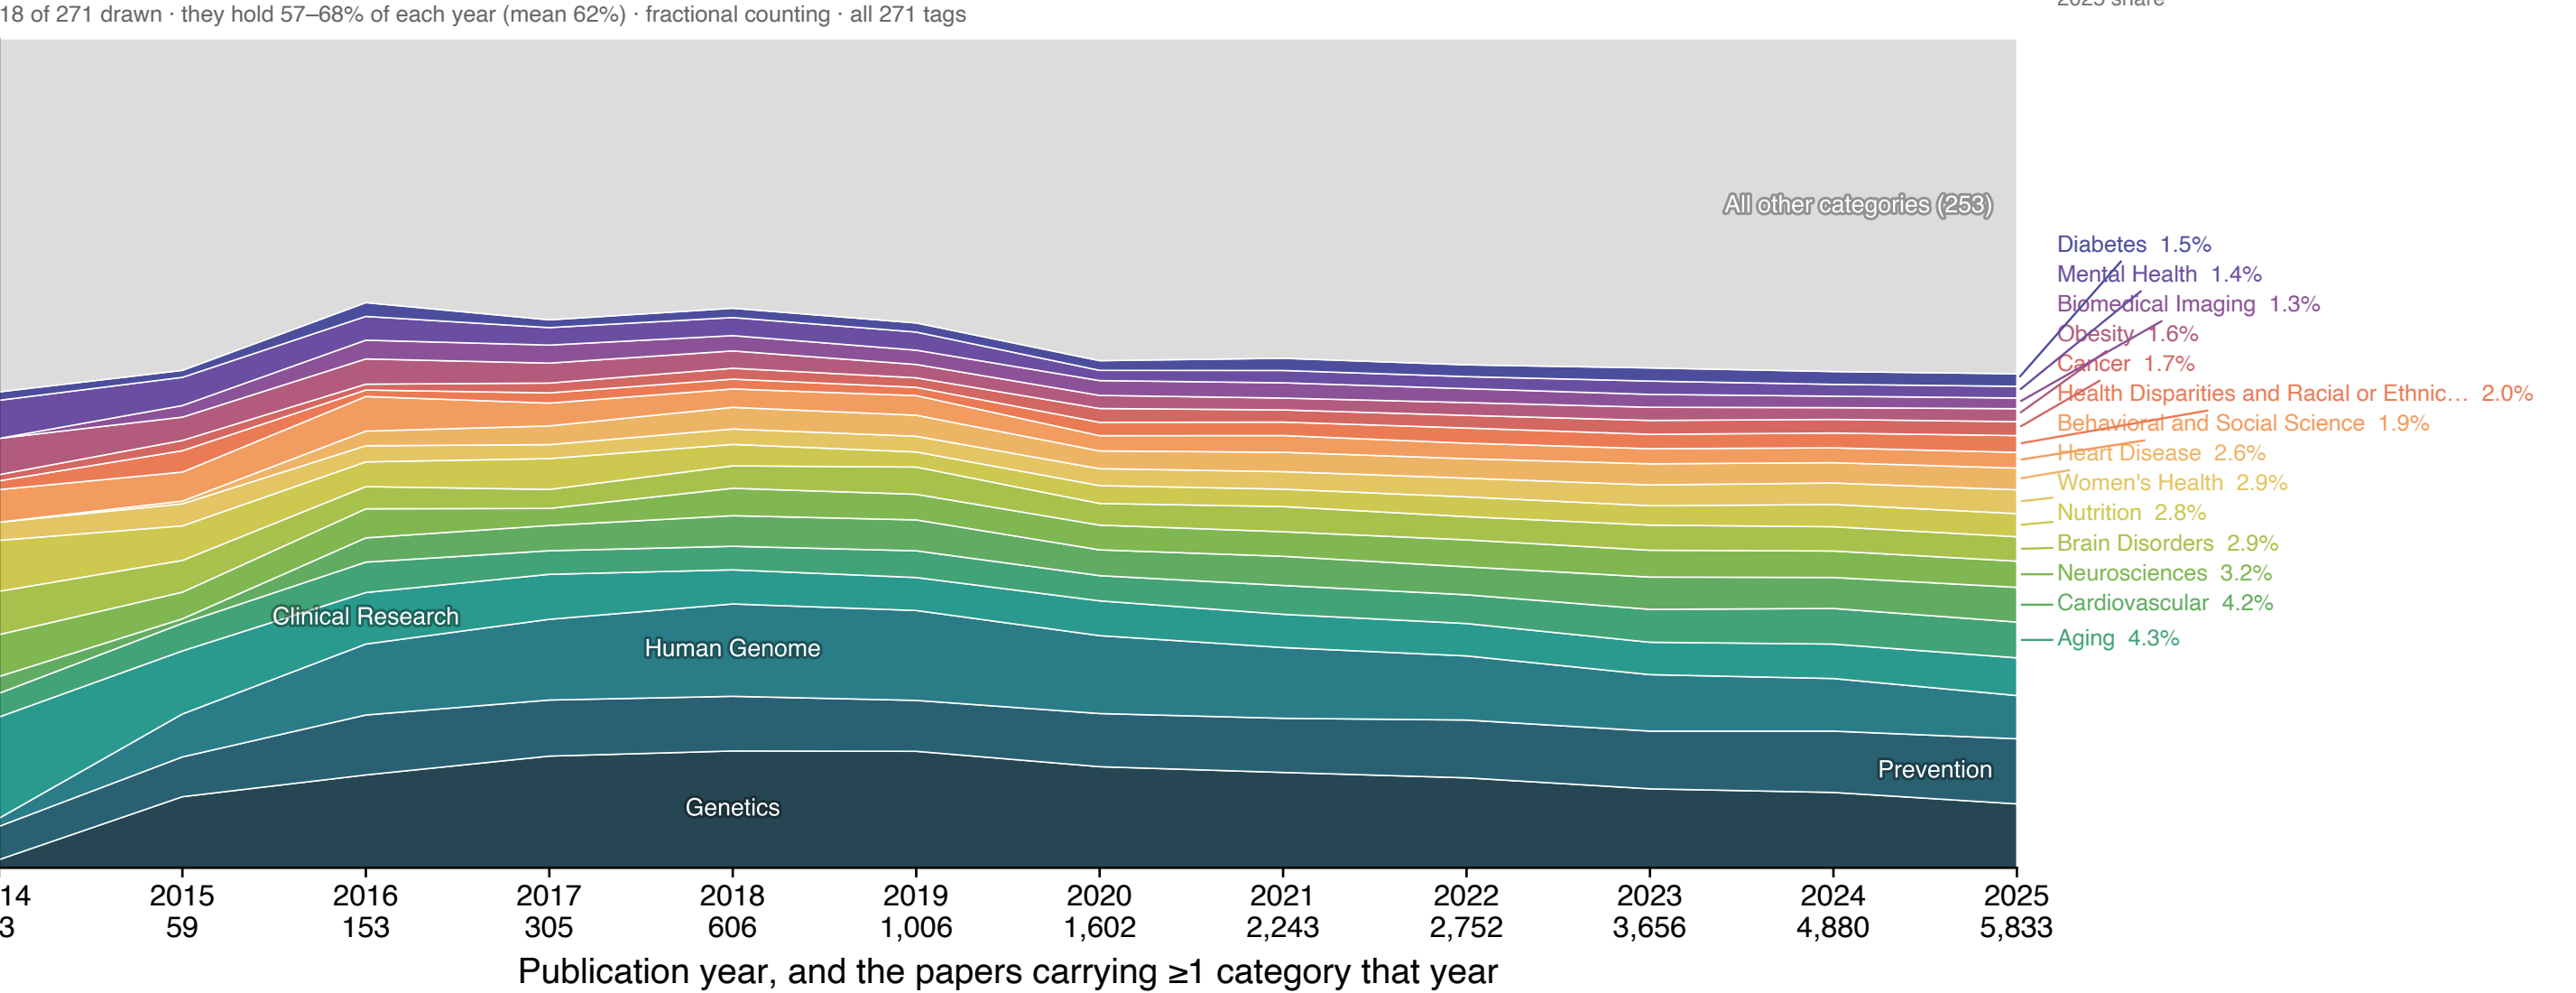

B

Fields of Research 2020, Level 4

C

RCDC categories

The window opens thin: 26 papers in 2014 and 61 in 2015, against 5,747 in 2025. A share across 119 fields computed on 26 papers moves ~4 percentage points when one paper changes, so read the left-hand edge of every panel as indicative only — each year's population is printed under its own tick, per panel, because the three vocabularies do not cover the same papers.
